

35mm Film

Medium Format

Film Scanning

Scan all your analogue film for reprinting or archival purposes. Certain models can scan 35mm filmstrip and mounted slides – either positive or negative – in a single operation. The CanoScan 9000F MkII also supports 120 format film (max. 6x 22cm).

Film Automatic Retouching & Enhancement

Restore scratched, damaged, dusty and faded film with ease, without tedious manual retouching. Canon's unique FARE Level 3 technology – integrated in the scanner – does the job for you using an infrared light that scans for physical defects on the film surface.

My Image Garden

Smart Software Included*

My Image Garden software, which provides effortless navigation between scanning functions and features superb photo organising capabilities, including face recognition. For easy document handling, My Image Garden features text recognition (OCR) and PDF file creation, with the ability to add password security to confidential documents. Canon's helpful Scan to Cloud feature allows users to scan to Evernote or Dropbox cloud services with a touch of a button, while Stitch Assist enables large A3 documents and photos to be scanned in two parts and stitched seamlessly together.

USB Powered

USB Powered

USB powered indicates that the scanner draws its power through a USB connection to a computer and no separate power source is required.
